This sequence represents the expression vector pAH4602.

This vector contains open reading frames encoding the heavy chain variable region (VH) of the antibody 128.1, an empicillin resistance gene and a histidine (histidinol) selection marker. Transcription of the VH gene is from the VH promoter of the murine 27.44 gene. The vector also includes a heavy chain immunoglobulin enhancer and the human gammal constant region (CH). The VH region of 128.1 was isolated by polymerase chain reaction and cloned into plasmid pAH4274. This was achieved by digesting the plasmid and the product with EcoRV and NheI. The VH gene was inserted in-frame with the human gammal CH region CH at the 3' end of the VH-J region by means of a NheI site. 128.1 is an anti-human transferrin receptor antibody which binds to the transferrin receptor on brain capillary endothelial cells. This antibody may be used in a conjugate in which it is linked to a neuropharmaceutical or diagnostic agent. The Conjugate may be used to treat or prevent neurological disorders and Alzheimers disease. It may also he used for

The sequences given in Q43846-48 represent the expression vectors pAH4625, pAH4807 and pAH4808. These vectors represent the cloning of the different human gamma isotypes, gamma-2, gamma-3 and gamma-4 respectively, with the variable region of the murine monoclonal antibody 128.1. These plasmids each encode a chimeric monoclonal antibody in which the heavy chain (VH) is derived from a murine source and the sequences encoding CH1, CH2 and CH3 are derived from a human source. These vectors in combination with the chimeric light
                                                                                                                                                                                                                                                    chain vector, pAG4611 (see also Q43845), were transfected into SP2/0 cells and clones were isolated. Antibody analysis using biosynthetically labelled proteins, immunoprecipitation and SDS-PAGE indicated appropriate bands for the heavy and light chains as well as the assembled antibody for the gamma-3 and gamma-4 chimeras. No detectable protein was isolated for the gamma-2 transfectants. 128.1 is an anti-human transferrin receptor antibody which binds to the transferrin receptor on brain capillary endothelial cells. This antibody may be used in a conjugate in which it is linked to a neuropharmaceutical or diagnostic agent. The conjugate may be used to treat or prevent neurological disorders eg. brain tumours, AIDS, stroke, epilepsy, methods

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Š
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   KM-750 heavy chain.

KM-750 heavy chain.

Monoclonal antibody; Ab; ganglioside GM2; chimera; chimeric antibody; expression vector; heavy; light; hypervariable region; CDR; constant region; hybridom hypervariable region; KM-796; KM-750; KM-603; cancer;
                                                                                   the Ab heavy and light chain variable region-encoding CDNA isolated from hybridomas producing a mouse or rat monoclonal Ab reacting with the ganglioside GM2 respectively into an expression vector for use in animal cells which contains the human Ab heavy and light chain constant region-encoding cDNA. The expression vectors are introduced into animal cells and the transformant thus obtained is cultured for the prodn. of a chimeric human Ab reacting with the ganglioside GM2. In contrast to mouse monoclonal Abs, the chimeric human Abs will not cause anti-mouse Ig Ab prodn. in the patient's body but show a prolonged blood half-life, with a reduced frequency of adverse effects, so that it can be expected to be superior to mouse monoclonal Abs in the efficacy in the treatment of human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Q45428;

                                                                                                                                                                                                                                                                                                 Disclosure; Page 14; 18pp; Japanese.

The sequences given in Q28522-23 encode fragments which were used in the construction of an agent for the treating and prevention of hypercalcaemia. The agent contained a portion of the antihuman parathyroid hormone-related protein monoclonal antibody (antihuman PTHrP MAb). The MAb was used as the active component in the agent. The agent further comprises a rodent/human chimeric MAb which has a rodent variable region and a human constant region and recognises
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Treatment and preventive agent for hypercalcaemia - contg. one anti-human para-thyroid-hormone-related protein monoclonal antia a rodent or chimera monoclonal antibody, fused gene and cell

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      δÃ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ry useful to detect tumour cells expressing GD2 and to target

ry therapeutic agents, e.g. toxins, to such cells

Disclosure; Page 11; 31pp; English.

CC The present sequence encodes a recombinant single chain peptide,

CC STI1-scFv. The peptide is an antibody construct comprising the variable

CC cregions of the heavy and light chains of an antibody against

CC distaloganglisside (GD2) as a single chain Fv fragment (scFv). GD2 occurs

CC in many tumours types including neuroblastoma, osteosarcomas and other

CC soft tissue sarcomas, medulloblastomas, high grade astrocytomas,

CC melanomas and small cell lung cancer. The peptide can be detectably

CC distaloganglisside (GD2) as a toxin, streptide can be detectably

CC distaloganglisside cell lung cancer. The peptide can be detectably

CC distaloganglisside cell lung cancer. The peptide can be detectably

CC melanomas and small cell lung cancer. The peptide can be detectably

CC distaloganglisside cell lung cancer. The peptide can be detectably

CC melanomas and small cell lung cancer. The peptide may further

CC converting enzyme, to cells expressing GD2. The peptide may further

CC comprise CD8 to facilitate the formation of GD2-targeted lymphocytes.

Following HAP purification, this DNA was used as tracer in a subtractive hybridization reaction. The driver was PCR-amplified cDNAs from pools of 5,000 clones made from the same 3 libraries. The pools consisted of I.M.A.G.E. clones 297480-303087, 682632-687239, 726408-728711, and 72996-731399. Subtraction by Bento Soares and M. Fatima Bonaldo."

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 source
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Submitted (18-JUL-1995) Andrew D. Farmer, HIV Sequence Database, Los Alamos National Labroatory, T-10, Mail Stop K710, Los Alamos, NM 87501, USA

HPV22 was originally isolated from macules on the chest of an Italian epidermodysplasia verruciformis (EV) patient [2]. The HPV22 genome, like that of HPV9 9, 15, 17a/b, 23, 37, 38, is smaller than most PV genomes at approximately 7.4 kb. Phylogenetic reconstructions based on DNA sequences of established types indicate that HPV22 is most closely related to HPVs 23 and 38, and then to 15, 17, 37 and 9. Although Kremsdorf et al [2] found substantial cross-hybridization between HPV22 and HPV19, nucleotide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           sequence comparison fails to support a close relationship between

A nucleic acid comprises a first sequence encoding a signal peptide (R94019) linked to a second sequence (T17728) encoding a single chain Fv fragment (R94020) that binds a human erbB2 oncoprotein. The anti-erbB2 SFv portion is obtained by PCR using e33scFv plasmid as template. The signal peptide directs the scFv to the endoplasmic reticulum. The nucleic acid is incorporated into a plasmid or viral vector to facilitate expression of the scFv antibody homologue within e.g. an epithelial carcinoma cell. Intracellular expression of the homologue inhibits surface expression of erbB2 and thereby inhibits cell proliferation and cell survival and decreases
                                                                                                                                                                                                                                  05-JUN-1997 (first entry)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                reals expressing this protein

Example 8; Columns 25-28; 28pp; English.

The present cDNA sequence codes for a claimed single-chain antibody, designated e23(FV), which binds to erbB-2. Monoclonal antibody e23 was generated by immunising mice with N/erbB-2 cells overexpressing the gpl85 protein, removing spleen cells and producing hybridomas by standard techniques. Messenger RNA coding for the anti-erbB-2 monoclonal antibody was isolated and converted to cDNA. Regions coding for the heavy- and light-chain variable regions were then amplified by PCR and joined via a sequence encoding a peptide linker. The resulting single-chain antibody is useful for in vitro diagnosis of tumour cells which overexpress the erbB-2 gpl85 marker, e.g. breast, ovarian and non-small cell lung carcinomas, and, when coupled to a cytotoxic agent, to treat such tumours.

The sequence encodes Qm212, a single chain antigen binding protein having a metal binding site which is derived from the 4-4-20/212 protein (Bird et al., Science, 242:423-426 [1988]), Qm212 differs from 4-4-20/212 by amino acid substitutions at residue positions 60, 62, 115 and 117 to provide for contact amino acid residues, where three of these contact residues form a metal binding site. The organism form which the gene originated is not given in the specification. The protein may be used to selectively partition and/or remove metal-protein complexes from a liquid phase or as be used to remove metal-protein complexes from a liquid phase or as

Chairment odn sequence codes for a calaimed single-chain antibody e21

Cdesignated e21(Fv), which binds to erbB-2. Monoclonal antibody e21

Cwas generated by immunising mice with N/erbB-2 cells overexpressing the gpl85 protein, removing spleen cells and producing hybridomas by standard techniques. Messenger RNA coding for the anti-erbB-2 coding for the heavy- and light- chain variable regions were then amplified by PCR and joined via a sequence encoding a peptide linker. The resulting single-chain antibody is useful for in vitro diagnosis of tumour cells which overexpress the erbB-2 gpl85 marker, e.g. breast, ovarian and non-small cell lung carcinomas, and, when coupled to a cytotoxic agent, to treat such tumours.

                             The source of human erbB-2 protein for the prodn. of antibodies no. 23 and 21 (055180/R45442; 055181/R45443) is a NIH/3T3 cell engineered to express the human erbB-2 protein on its surface (N/erbB-2). Abs no. 21 and 23 are directed against the extracellular domain of gp185 erbB-2. Nude mice manipulated to produce rapidly growing tumours were used in a trial of the efficacy of the Abs. In animals given a combination of the 2 Abs, tumours completely regressed after 11 days.

Example: Fig 10A; 118pp; English.

"4-4-20 VL" means the variable region of the light chain of the
4-4-20 mouse monoclonal antibody (Bird, R.E. et al., Science 242:423
(1988)). The number "212" refers to a specific 14-residue
polypeptide linker that links the 4-4-20 VL and the CC49 VH. See
Bedzyk, W.D. et al., J. Biol. Chem. 265:1865-18620 (1990). "CC49 VH"
is the variable region of the heavy chain of the CC49 antibody,
which binds to the TAG-72 antigen.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              In order to try to reduce antigenicity in humans, the hinge sequence of the most common IgG class, IgG1, was chosen. In the design for the hinge region, the C-terminal serine in the 4-4-20/212 singl-chain antigen-binding protein was made the first serine of the hinge and the second residue of the hinge was change from a cysteine to a serine. The hinge regions were added by introduction of a BstE II restriction site in the 3'-terminus of the gene encoding the 4-4-20/212 single-chain antigen-binding
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New multivalent antigen-binding protein e.g. contg. CC49 Mab regions - useful in diagnosis, for destroying blood clots and targetting cytotoxic agents or enzymes to tumour cells Example; Fig 15B; 118pp; English.

Erree cysteines were engineered into the C-terminal of the Free cysteines were engineered into the C-terminal of the 4-4-20/212 single-chain antigen-binding protein, in order to chemically crosslink the protein. The design was based on the hinge region found in antibodies between the CH1 and CH2 regions.
                                                                                                                                                                                                                                                                                                                                                                                                                       Oligonucleotide probe MK14-A Oligonucleotide; DNA probe; m
              Oligonucleotide probe MK14-A consists of nucleotides 5-95 of (Q51735). It hybridized to all spp. of mycobacteria tested, cross reacted to a few non-mycobacterial spp. The probe may be useful as an initial screen for mycobacterial infection.
                                                                                                                                                                                                           (BECT ) BECTON DICKINSON CO

cytostatic; phospholipase A activating protei
therapy; monoclonal antibody; CC49; ds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Claim 3; Page 14; 23pp; English.
Oligonucleotide probe MK14-A consists of nucleotides 5-95 of (Q51735). It hybridized to all spp. of mycobacteria tested, cross reacted to a few non-mycobacterial spp. The probe may be useful as an initial screen for mycobacterial infection. See also Q51735-45 and Q51747-59.

                                                                                                                                                                                                                                                              New antigen binding proteins contg. immunoeffector or cytolytic peptide - attached to variable regions of antibody light or heavy chain, useful in diagnosis and in destroying cancer cells Example 1; Fig 4A-B; 72pp; English.

A novel DNA construct (T29058) codes for a single-chain antigen-binding fusion protein (R97380) comprising the light chain variably region (VL) of monoclonal antibody CC49 linked to the CC49 VH region via a spacer peptide (R97379). With a C-terminal phospholipase A activating protein (FDAP) immunoeffector peptide (R97368). It was obtd. by ligating a synthetic PLAP fragment to a existing CC49/212 gene, and can be used to produce the fusion protein in transformed host cells. The fusion protein combines
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   T29058
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        (BECT ) BECTON DICKINSON CO

A novel DNA construct (T29059) codes for a single-chain antigen binding fusion protein (R97381) comprising the light chain variable region (VL) of monoclonal antibody CC49 linked to the CC49 VH region via a spacer peptide (R97379) and with an N-terminal phospholipase A activating protein (PLAP) immunoeffector peptide (R97368). It can be used to produce the fusion protein in transformed host cells. The fusion protein combines the tumour antigen-binding capability of CC49 with the immunoeffector function of PLAP.
